DUNK TANK
INSTRUCTION SHEET

Towing Instructions
1. A 2” trailer ball is required
2. Hook up trailer with safety chains secured to the vehicle and hook up the lights as well
3. Secure two ropes to the side canvas frame, to make sure they are secure. Check seat to see that it is in the “up” position and locked.
4. Place target, target arm and tennis balls safely in your vehicle

Set Up
1. Select level area for set up
2. Unhook trailer and lights from tow vehicle and roll to set up area (NOTE: trailer and tank are 1 unit, do not try to separate!)
3. Raise tongue end of trailer and remove hitch pins from tongue bar. Slide tongue bar out and replace pins in bar.
4. Slowly lift up from open end of tank to set tank upright. Be careful not to drop tank on its end. Set tongue bar behind tank on the ground.
5. Untie rope holding side canvas frame and swing out into position. It will be necessary to block the bottom of the frame so the wind does not move it as this will cause the target arm to bend.
6. Check drain plug to make sure it is tight and then fill tank to the top with water (approx. 300-500 gallons).
7. Install red target disk and target arm. Arm must be installed first, being careful to get flattened end through hole in canvas. Install target to end of the arm.
8. Test target function by pushing against it. The seat should drop, if installed correctly. Raise seat and close vice grip located under the seat.
9. You are now ready to enjoy the safe operation of this dunking booth.
10. Review safety rules!
Dunk Tank Operation

1. Check to see that seat is properly locked and vice grip is released when the target is moved in. Be sure to show this to the person that will be in the tank as they will have to know how to reset the seat and vice grips each time it is released, before they get back on the seat again. Please inform the “dunkee” to keep their hands on their knees and sit forward when on the seat.
2. Make sure the balls that come with the dunk tank are the only ones used. Any other types of balls will damage the tank and hurt the person inside the tank.
3. Be sure to watch the water level in the tank and keep it full.
4. As soon as you are finished using the dunk tank, remove the drain plug and let the tank empty. This process may take some time.
5. Should you have any problems, please do not hesitate to call (717)336-0777.

Take-Down

1. Remove drain plug and allow tank to empty completely.
2. Remove target from target arm. Place seat in locked position.
3. When tank is completely empty, replace drain plug securely.
4. Close canvas frame against side of tank and tie a rope across front of tank to trailer frame on opposite side.
5. Standing behind tank, slowly pull tank over onto the trailer wheels, being careful not to drop it. (Do not attempt this step until tank is completely empty.)
6. Rise up front of trainer (bottom end of tank) and install tongue bar, putting both pins in place.
7. Make sure you have collected all the balls as they will need to be returned with the dunk tank along with the target and target arm.
8. Review towing instructions.

Safety Rules

1. Keep dunk tank away from electricity
2. Keep water level filled to at least 8” from top of tank.
3. Keep all non-swimmers and anyone less than 5’ tall out of tank
4. Only one dunkee at a time.
5. Only use the balls provided.
6. NEVER stand on seat
7. Do not hit target with hands
8. To keep from slipping, always wear tennis shoes
9. Do not leave tank unattended when filled
10. When sitting on seat always keep your hands on your knees and sit forward
11. When towing ALWAYS use a safety chain and double check the brake lights and turn signals.
